

We prepare year-round for storms.

Versant Power works all year long to minimize outages by cutting and pruning trees.

If you'd like to be notified before crews begin work in your area, just ask. You can also request that we speak with you before cutting and pruning trees along your property.

Contact our vegetation management team at VersantPower.com/trees or call our Vegetation Management Coordinator at (207) 973-2892.

Be safe around power.

Plan before planting.

Planting trees on your property this spring? Before you get started, keep the following tips in mind:

- Look up and down. Always be safe around power lines.
- Don't plant trees near power lines. Research the height of your desired tree at maturity and plant your trees at least as far away from power lines as they will stand at full height.
- Check on planting restrictions near roads, and call Dig-Safe at 811 to ensure that there are no buried lines or pipes.
